Client Service:

- Deliver value through analytically sound projects and services
- Communicate assumptions and results to other internal consultants
- Communicate and interact with consultants in a problem-solving advisory capacity
- Respect and maintain client confidentiality

Build Analytics Tools:

- Assist with the aggregation of internal and external data sources into cohesive, efficient data stores to be used for quantitative modeling
- Responsible for assessing data and delivering insights from the data / analysis
- Reading policies and interpretation of policy wordings
- Utilize existing statistical mathematical models and work with the data compiled to determine financial projections, conduct cost-benefit analyses, or develop risk projections based on a variety of factors
- Assist in the preparation of reports based on the results of the analyses
- Assist with the research for new product design
- Ensures appropriate peer review for all work product

Communication:

- Participates in effective oral communications with other team members on technical concepts and deliverables

Client Development:

- Product innovation with client development in mind

Colleague Development:

- Participates in team environment of continuous feedback and idea sharing concerning specific engagements and bigger picture issues on a technical standpoint

REQUIREMENTS:

- 2-3 years experience in actuarial role required, preferably in an insurance setting
- Relevant knowledge of P&C insurance products is an asset but not mandatory
- Analytical and Mathematical prowess required
- Strong computer skills (Excel, Access, VBA programming a plus)
- Organization skills including data and task management
- Fundamental communications (Oral and Written)
- Creative Mindset
- Capable of self-directed work
- Actuarial exams or designation an asset but not mandatory
- Dedicated work ethic and integrity;
- Strong oral, written and communication skills.
